

**Amendments to the Specification:**

Please, replace paragraph [0008] with the following amended paragraph:

[0008] Although the Worktable of United States patent no. 5,067,535 has a spring 28 to aid the unfolding of the legs for the table and wheels 30 to make transporting the table when the legs have been folded easier, the spring functions over only a limited range; and the legs to which the wheels are attached extend straight beyond the wheels~~legs~~, creating a potential physical conflict with the ground or other objects when the wheels are utilized to push or pull the table.

Please, replace paragraph [0030] with the following amended paragraph:

[0030] A first embodiment of the Folding Work Table includes, as illustrated in FIG. 1, FIG. 2, and FIG. 3, two one-piece legs 1, 2. A first end 3 of the first one-piece leg 1 is pivotally attached to a tabletop 4 having a first end 5, a second end 6, a first side 7, and a second side 8, with such attachment preferably being near the first end 5 of the tabletop 4. Similarly, a first end 9 of the second one-piece leg 2 is pivotally attached to the tabletop 4, preferably near the first end 5 of the tabletop 4, but at a point of attachment 10 which is closer to the second side 8 of the tabletop 4 than is the point of attachment 11 for the first end 3 of the first one-piece leg 1.
